Abstract: One of the most oft-used terms after the pandemic is the term “new normal.” The new normal in education is the increased use of online learning tools. The COVID-19 pandemic has triggered new ways of learning. All around the world, educational institutions are looking toward online learning platforms to continue with the process of educating students. The new normal now is a transformed concept of education with online learning at the core of this transformation. Today, digital learning has emerged as a necessary resource for students and schools all over the world. For many educational institutes, this is an entirely new way of education that they have had to adopt. Online learning is now applicable not just to learn academics but it also extends to learning extracurricular activities for students as well. In recent months, the demand for online learning has risen significantly, and it will continue doing so in the future. As with most teaching methods, online learning also has its own set of positives and negatives. Decoding and understanding these positives and negatives will help institutes in creating strategies for more efficiently delivering the lessons, ensuring an uninterrupted learning journey for students.

Key words: advantage, efficiently, positive, available, variety of reasons, networking opportunity, fortunately, opportunity, strategy, appropriate, assure, flexibility.

INTRODUCTION.

Most countries are better prepared to move to online learning strategies, although with a lot of effort and challenges for teachers and parents. In middle-income and poorer countries, the situation is very mixed and if we do not act appropriately, the vast inequality of opportunities that exists – egregious and unacceptable to start with – will be amplified. Many children do not have a desk, books, internet connectivity, a laptop at home, or supportive parents. Others do. What we need to avoid – or minimize as much as possible – is for those differences in opportunities to expand and cause the crisis to have an even larger negative effect on poor children's learning.

Fortunately, we are seeing a lot of creativity in many countries. Rightly so, many ministries of education are worried that relying exclusively on online strategies will imply reaching only children from better-off families. The appropriate strategy in most countries is to use all possible delivery modes with the infrastructure that exists today. Use online tools to assure that lesson plans, videos, tutorials, and other resources are available for some students and probably, most teachers. But also, podcasts and other resources that require less data usage. Working with telecommunication companies to apply zero-rate policies can also facilitate learning material to be downloaded on a smartphone, which more students are likely to have.

Of course, Uzbekistan, our country is one of the richest countries where we can have all opportunities that we can continue our education in on-line system. As

I remembered before we have all resources lesson plans, videos, tutorials.

All net sources are available. True, we have some places in my country these are free from these praises. But the head of our country Sh. M. Mirziyoev and the ministry of education are worrying of these cases and taking all the

actions .

1.What Are The Advantages Of Online Learning?

Flexibility

Students have the freedom to juggle their careers and school because they aren't tied down to a fixed schedule. In a traditional classroom setting, class meeting times are set, and the student has no power over this, forcing them to work their schedules around these dates. Most people who choose online learning tend to have other commitments, and prefer this mode of learning as it gives them power over how they will delegate their time towards their different projects.

Reduced Costs

Online education can cost less due to a variety of reasons. For example, there is no cost for commuting. Assorted costs that are related to transport, such as fuel, parking, car maintenance, and public transportation costs don't affect the online student.

Networking Opportunities

Online education also provides students with the chance to network with peers across nations or even different continents. This often leads to other opportunities in terms of collaboration with other individuals in the implementation of a project. At the same time, it makes them culturally sensitive and able to fit into other environments easily given their exposure to other cultures.

Documentation

All the information that you will need will be safely stored in an online database. This includes things like live discussion documents, training materials and emails. This means that if there's ever anything that needs to be clarified, the student will be able to access these documents fast, saving valuable time. This is especially

useful for individuals that need to carry out research for a project and submit their findings to a panel.

Increased Instructor - Student Time

Students in traditional classrooms may not get the personalized attention they need to have concepts clarified. Although class sizes are small at CCA, most colleges have classes of students that number in the hundreds. This is not a problem for this type of education because online guided discussions and personal talk time with their professors and lecturers is a hallmark of online classes. This increases the chances of a student performing well due to the time their instructors give them. This also enhances their problem-solving and communication skills, as well as knowing how to defend their arguments to superiors if needed.

Access to Expertise

An online college education might give students access to specialized degree courses that may not be available in an easily accessible or local institution of learning. Online classes allow the sharing of expertise that helps more people have access to education that is not readily available in certain geographic locations.

This type of education has grown over the last few years and has experienced mainstream acceptance. With an online class, you get to control your learning environment, which ultimately helps you develop a deeper understanding of your degree course. New models of learning are always springing up in the market, providing students with varied opportunities to fashion their education into something that fits them, not the other way round. It also provides individuals an opportunity to finish a degree they might have started and were unable to continue with for one reason or another. The future of online degree education looks promising, and opens up education to a larger section of the population than ever before.

As for me, I plan my on-line lessons . I'd like my students to do my tasks.

I'd like to mark my students according to this list

Efficiency online learning offers teachers an efficient way to deliver lessons to students. Online learning has a number of tools such as videos, PDFs, podcasts, and teachers can use all these tools as part of their lesson plans. By extending the lesson plan beyond traditional textbooks to include online resources, teachers are able to become more efficient educators.

Accessibility Of Time And Place Another advantage of online education is that it allows students to attend classes from any location of their choice. It also allows schools to reach out to a more extensive network of students, instead of being restricted by geographical boundaries. Additionally, online lectures can be

recorded, archived, and shared for future reference. This allows students to access the learning material at a time of their comfort. Thus, online learning offers students the accessibility of time and place in education.

Improved Student Attendance Since online classes can be taken from home or location of choice, there are fewer chances of students missing out on lessons.

Suits A Variety Of Learning Styles Every student has a different learning journey and a different learning style. Some students are visual learners, while some students prefer to learn through audio. Similarly, some students thrive in the classroom, and other students are solo learners who get distracted by large groups. The online learning system, with its range of options and resources, can be personalized in many ways. It is the best way to create a perfect learning environment suited to the needs of each student.

2. What Are The Disadvantages Of Online Learning?

Inability To Focus On Screens. For many students, one of the biggest challenges of online learning is the struggle with focusing on the screen for long periods of time. With online learning, there is also a greater chance for students to be easily distracted by social media or other sites. Therefore, it is imperative for the teachers to keep their online classes crisp, engaging, and interactive to help students stay focused on the lesson.

Technology Issues Another key challenge of online classes is internet connectivity. While internet penetration has grown in leaps and bounds over the past few years, in smaller cities and towns, a consistent connection with decent speed is a problem. Without a consistent internet connection for students or teachers, there can be a lack of continuity in learning for the child. This is detrimental to the education process.

One of the most disadvantages of on-line education is a real teacher. Nothing can be replaced by the real perfect teacher.

Learning is often considered to be a normal part of working and personal life. Both learning for achieving a job as well as for achieving knowledge should not be neglected. Online environment is changing continuously and it represents a great opportunity for learning. It is very important to discover how to learn using all available communication channels and choosing the ones that best suit a person's style of filtering the information.
